

Data Collection and Analysis Software

The Remark Classic OMR® software helps you collect data from tests, surveys or other forms. The software virtually eliminates manual data entry and errors in your data. It easily works with preprinted forms utilizing an optical mark reader and a PC. Remark Classic OMR is perfectly suited for educational institutions, government agencies, marketing research firms, and many other industries and users on any level.

Efficient and Reliable

Remark Classic OMR combines the reliability you expect from OMR technology with the convenience of PC data analysis. Apply real time processing to your tests, surveys, questionnaires and forms. As your forms are scanned, you can capture the data instantly and view it on your computer screen. You can count on Remark Classic OMR for your data collection needs.

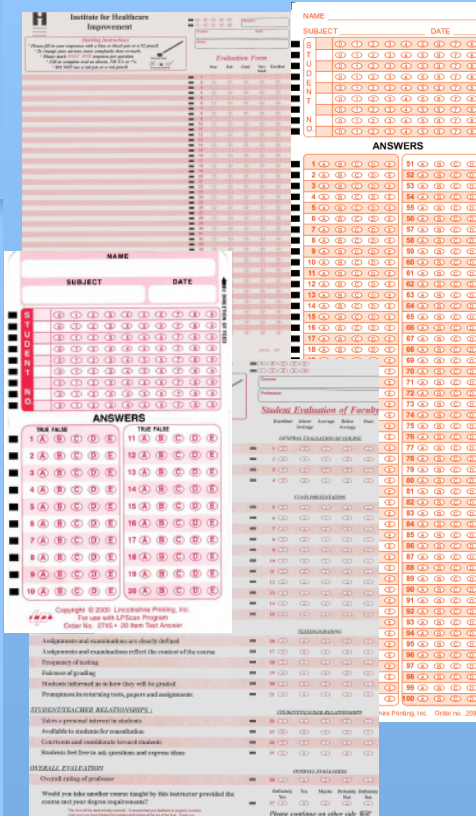

Flexibility and Functionality

Remark Classic OMR is very flexible in that it can work with most any form that works with a traditional OMR machine. Remark Classic OMR works with many standard forms that are in use today. For those forms, pre-defined templates are included in the software. For Sekonic scanners, the software also supports the optional barcode reader, the transport printer, and also the Reject Stacker for Pearson OpScan models. Built in exception handling easily locates and allows you to correct or verify any erroneously marked forms (i.e. a person fills in two marks for a question, or fails to answer a question).

Analysis With Remark Quick Stats®

Remark Classic OMR includes Remark Quick Stats, which provides powerful test grading and survey analysis functions with the click of a button. If you administer tests, the software can automatically grade them. You can specify an answer key, grade scale, map questions to learning objectives, set benchmark values and more using the Grade Wizard. Then the software can grade the test and produce reports representing the students' performance, item analysis, frequency distribution, student scores and other data. Remark Quick Stats also produces a grade report for each student which can be printed and handed back. For survey applications, Remark Quick Stats can tabulate your survey and then run reports such as an item analysis, item statistics or crosstabs to view your results. Data can be exported to a variety of different formats, including: MS Excel, ODBC, ASCII, SPSS®.

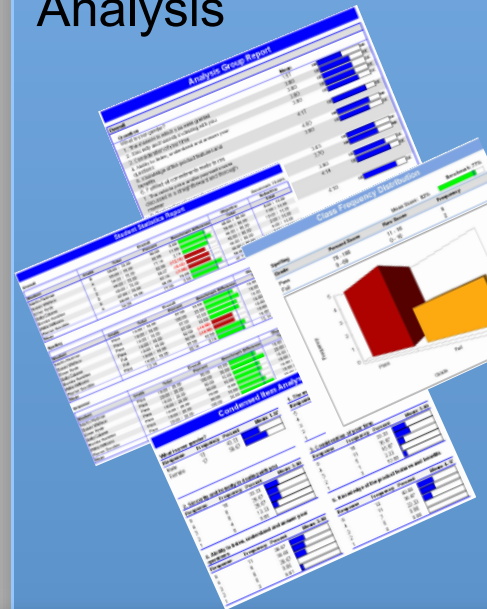

PrePrinted Forms

Remark Classic OMR

Main Features

- Forms commonly scanned with Remark Classic OMR include surveys, tests, research studies, evaluations, assessments, inventory, field testing, patient history and many others!
- Exceptional optical mark recognition
- Works with common OMR readers
- Supports barcode reader on Sekonic OMR readers
- Supports transport printer on Sekonic OMR readers
- Prints user-specified information on scanned sheets when used in conjunction with a Sekonic reader containing a printer
- Provides Template Editor to define most any OMR form for use in the product
- Processes double-sided and multi-page forms
- Easy-to-use exception correction facility
- Eliminates pre-sorting of forms with automatic form, page and respondent identification features
- Eliminates pre-sorting of forms with automatic form, page and respondent identification features
- Processes batch header sheets
- Saves data to over 30 different file formats including: *SPSS, Access, Excel, dBase, Lotus, XML, ASCII and many more*
- Grades test and tabulates surveys
- Produces customizable graphs of grade/survey results and statistics
- Calculates statistics including: *Item Analysis, Number of Respondents and Tabulations, High/Low Score, Median, Mean, Range, Standard Deviation and Variance, Kuder-Richardson f20, Coefficient Alpha, P Values, Point Biserial, Frequency Distribution, Class Grades, Student Grade Reports, Comparative Reports*
- Includes a Grade Wizard that supports multiple answer keys, multiple grade scales, benchmarking and learning objectives
- Exports analysis reports to PDF, Excel, HTML, RTF, and other formats
- 30 days of free technical support
